FALL 2024

CLOVER CORP.

# HVAC NEWS

## TIME IS RUNNING OUT

Yesterday's best practices are today's requirements.  
 Don't **FALL BACK**, we've got the latest updates!

## ARE YOU READY?

*The CHCC Trade show is coming up! Don't miss out!*

The Annual Trade Show of the CHCC is just around the corner. Browse the **Top 40** vending exhibitors, products & services, cooling the future and beyond.

**When:** October 24th 4-7pm

**Where:** The Truck Bar at 151 Webster Square Rd Berlin in Central Connecticut

**Cost:** FREE

## WINTER IS COMING

*As temperatures begin to drop, it's time to start thinking about heating upgrades!*

Infrared heaters have been installed in thousands of installations around New England. Patios, Garages, Horse Stables, Warehouses, Restaurants, etc. have all chosen to heat with infrared saving energy and costs. There is a system for every type of installation. You name it, we supply it!

### **Get your rebates while you still can!**

Energy rebates for gas equipment will be going away **Jan. 1, 2025**. If you install infrared heat before December 31, 2024 you can apply for an energy rebate from Energize CT, **\$500 to \$850** per heater, depending on model and size. Order your equipment asap and have it installed by end of this year. *Don't miss out! Call us 860-528-0081 for assistance!*

## THE TIMES ARE CHANGING

*Following the outbreak of COVID-19, advancements in HVAC technology were created.*

In May 2023 the CDC updated ventilation guidance to reduce the airborne transmission of viruses. ASHRAE recently issued the first pathogen standard, which includes minimum equivalent clean airflow in cubic feet per minute, per person for commercial, residential and health-care space types. Using high efficiency particulate filtration is your best option!

## SAY HELLO TO THE FUTURE OF HVAC

APCO provides award-winning air treatment for residential installations and has a model designed for limited space installations with narrower ducts.

This technology provides additional clean air with only a small increase in energy cost.

Fresh-Aire UV offers a line of commercial products with germicidal UVC light system to reduce the risk of airborne infectious diseases caused by viruses, bacteria and mold (microbes). UVC light (which is present in sunlight) penetrates the cell walls of microorganisms and inactivates them.

## THE REPLACEMENT MARKET IS HERE TO STAY

*Earn customers \$600 with the improvement tax credit for HVAC installations/upgrades by meeting new high efficiency standards.*

Rebates by Energize CT still offer the option to upgrade and save energy and up-front costs when replacing a non-condensing gas furnace with a condensing gas furnace, 95% efficient or greater, **through December 31, 2024.**

New terms and conditions for rebate payments are:

- Signed Application (with any post installation changes)
- Pre-Approval and/or Post-Inspection letters (if required)
- IRS W9 Form (for payee)
- Installation Invoice listing:
  - Contractor name and address
  - Equipment Manufacturer and Model Numbers
  - Installation Date & Address
  - Total Install Cost & Proof of Payment

*Application forms are available on-line at [EnergizeCT.com/nonlighting/apply](https://www.energizect.com/nonlighting/apply) or contact us for a copy and further information.*

## DID YOU KNOW?

The U.S. has more than **119,000,000** homes and **47%** of them rely on natural gas as their primary heating fuel. In fact, most are still using non-condensing furnaces, (only 80% efficient) rather than condensing units that are more efficient.

## TIME FOR AN UPGRADE?

*95% condensing Gas furnaces are energy efficient and reduce fuel usage and costs.*

When you choose Concord, each furnace comes with the promise of quality and reliability. That's because they use 100% factory run-tests to help ensure dependable start-up and operation. With a 10-year limited parts warranty and lifetime heat exchanger warranty, you get the protection you need guaranteed.
